

Global Bioenergies is fostering the environmental transition through biosciences

Global Bioenergies (GBE) has successfully developed a unique process to synthesize bio-based isobutene (IBN) and its numerous high-performance derivatives, and is now looking to build manufacturing plants to reach large scale markets

GBE has developed a unique bioprocess to synthesize isobutene from natural sources

... by leveraging breakthrough research

-  **Process unique in the world**
-  **Like-for like substitute for petrochemical molecules**
-  **Bio-based molecules** produced from agricultural and forestry byproducts⁽¹⁾
-  **Gradual, proven improvement** of process performance
-  **Patent protected process**
-  **Supported by L'Oréal**, worldwide leader in cosmetics

Note: (1) Such as beet sugars, wheat starch, and wood chips

IBN derivatives have high-value applications in many markets

IBN is the **smallest branched carbon structure** on Earth, which can be converted into numerous **high-performance compounds**.
 These performances traditionally **cannot be obtained from products extracted from Nature**

Strategic focus following market assessment

Other Potential markets

IDD and IHD⁽¹⁾

Cosmetics

Sustainable Aviation Fuels

Perfect replacement for petrochemical IDD and a good alternative to cyclic silicones in make-up, skin care and hair care

ASTM-certified SAF pathway with the potential to replace petrochemical jet fuel in planes

High sales price

Large volumes

Other IBN derivatives

Lighter fuel

Fragrances

Road fuels

Paint

Propellant

Adhesives

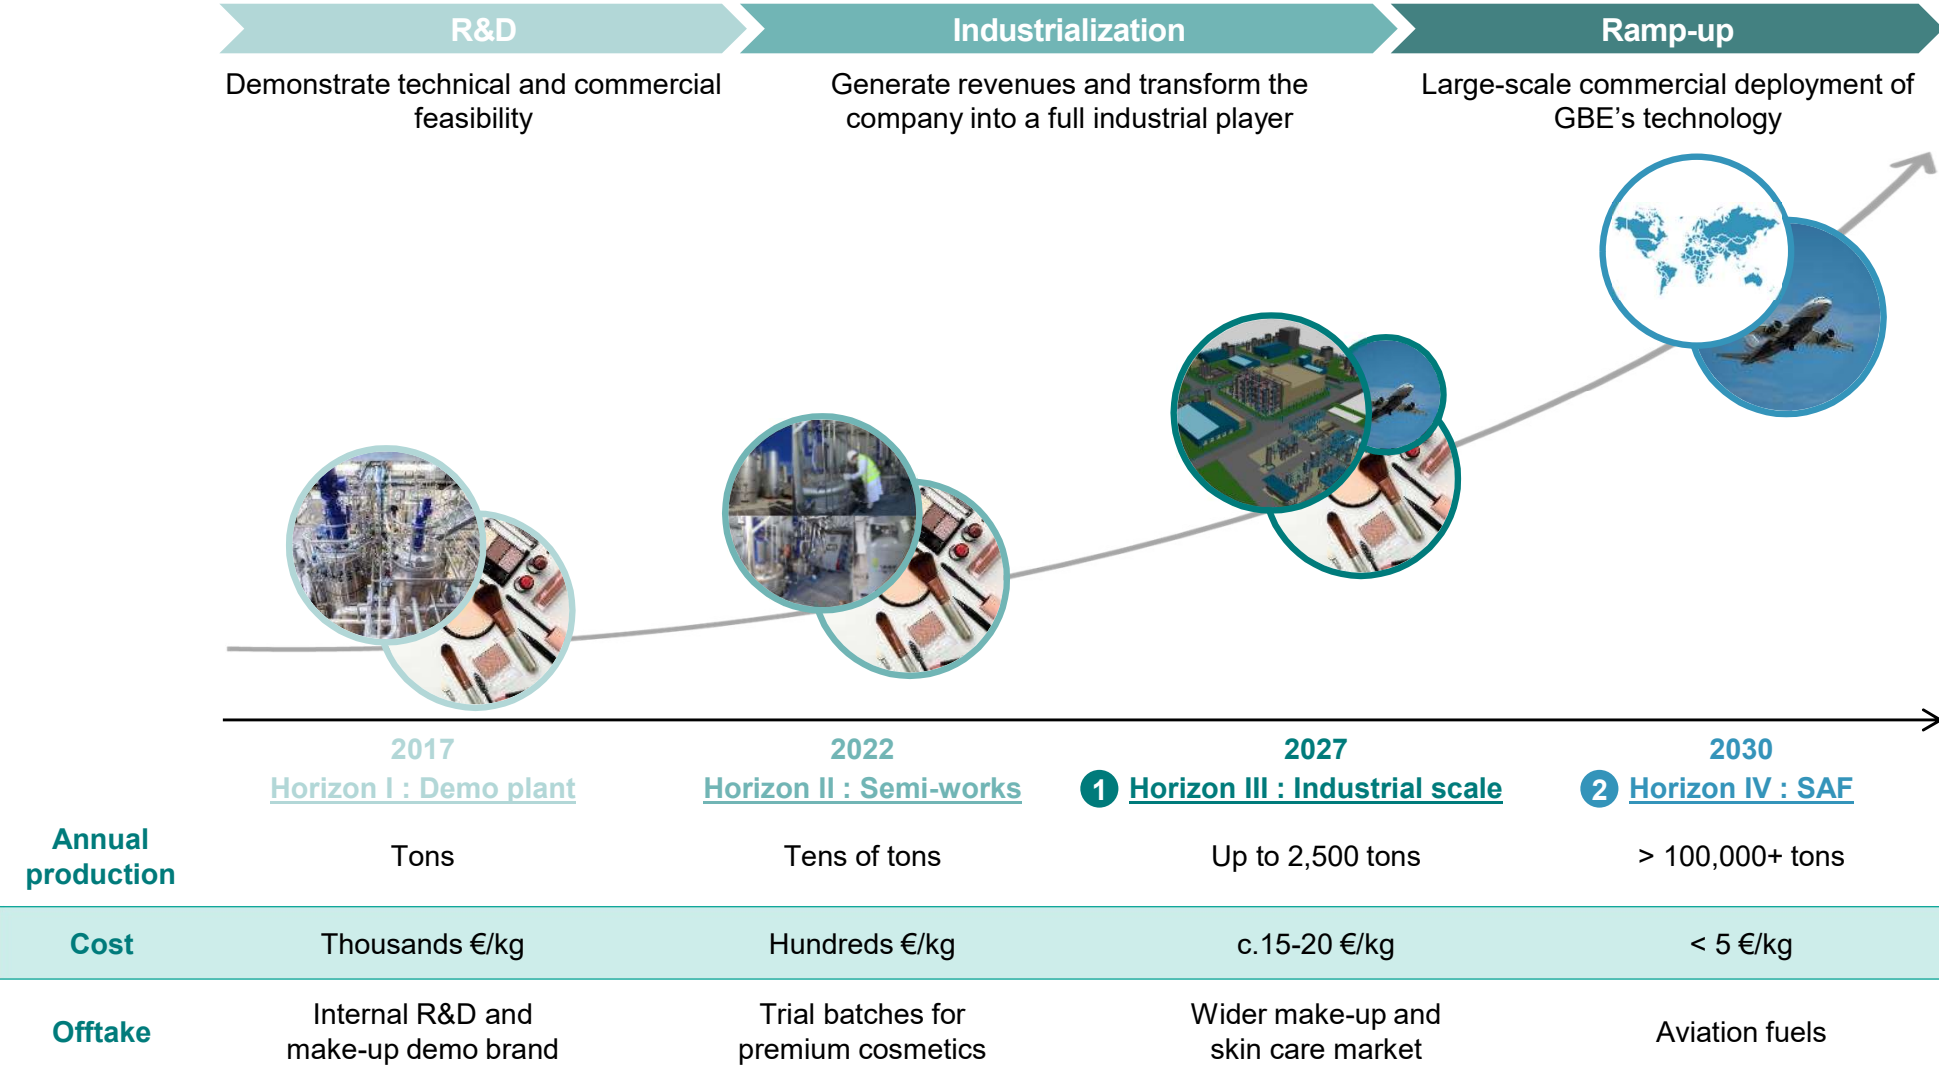

Butyl rubber

Plexiglass

And : lubricants, sealants, cling films, additives

GBE's strategic roadmap: from cosmetics to biofuels

GBE has achieved several significant milestones in the last few months

Significant decrease in production costs achieved through **better-performing bacterial strains and integrated process**

c.3x
Reduction in projected production costs, year-on-year

Several letters of intent received from renowned cosmetics players at **attractive prices, for volumes exceeding plant capacity**

2,500+
Tons of commercial production secured via letters of intent

Significant public subsidies obtained highlight support of GBE by policymakers and reduce equity needs

€20m+
Public subsidies and pre-funding achieved

GBE's fuel can now be blended with fossil jet fuel as a drop-in fuel in existing airplanes following successful ASTM certification

ASTM
Certification achieved

1

Horizon III production will be mainly be dedicated to the global cosmetics market

IDD and IHD are key ingredients in cosmetics

IDD and IHD are **used since decades in cosmetics** for their unique properties

Isonaturane™ is a perfect replacement for petrochemical IDD/IHD

With the **same molecular composition and properties**, GBE's Isonaturane™ can replace petrochemical IDD/IHD **on a like-for-like basis** and is a good alternative to cyclic silicones (CS)

Using GBE's Isonaturane™ is the only way for brands to claim naturalness

Switching from petrochemical IDD to GBE's natural product enables a **strong marketing claim** and product differentiation for cosmetic brands at a **limited increase in sourcing costs** (below 0.5% of the total retail price⁽¹⁾)

Isododecane's main properties

Isododecane's strongest case is in **long-wear, waterproof and no transfer** make-up and skin care formulas

Powerful solvent

Highly volatile

Aerial emollient

Safe to use

Core global addressable market for GBE

in tons

Impact of switching to GBE's IDD on naturalness

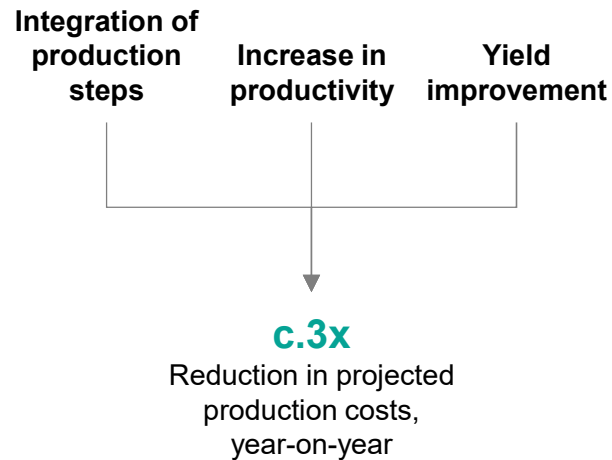

Process improvements have resulted in significant commercial traction over the last few months

GBE has significantly improved its process

By **improving the performance of its proprietary bacterial strains** and **integrating several processing steps**, GBE has achieved a major decrease of the production cost of IBN derivatives

Improvement in production costs

GBE has validated the global cosmetics market interest for IDD/IHD

GBE has managed to obtain over the past months several **letters of intents** from renowned cosmetics players **worldwide** and has **ongoing discussions** for additional volumes – with several regions yet to be tapped

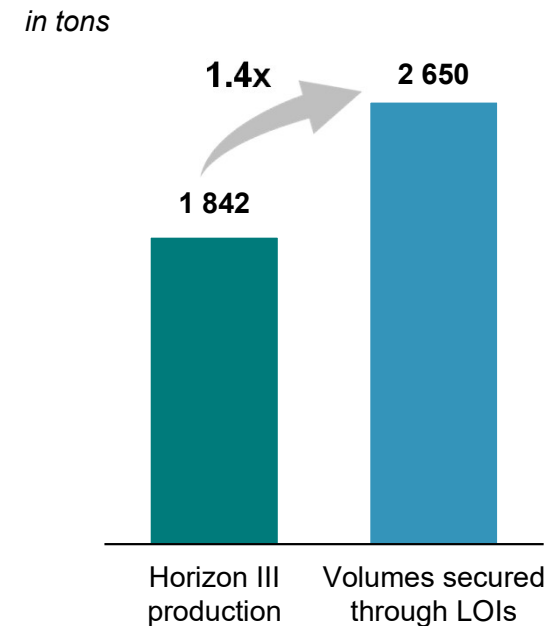

Origin of LOIs received

Total volumes now exceed plant production capacity

The **Horizon III production is largely oversubscribed**, confirming the market's interest for IBN and IBN derivatives – at **prices ensuring an attractive return profile for the project**

2028 production capacity vs. offtake volume
